

Londonwide LMCs

The professional voice of London general practice

Workforce survey results - winter 2020

We had responses from 384 individuals, working in 316 different practices out of the 1,100 member practices surveyed between 24 November to 16 December 2020. This represents a response rate of 29% of practices surveyed or 27% of the total 1,166 practices represented by Londonwide LMCs. A third of responding practices (35%) were carrying GP or nurse vacancies and another third (32%) have a GP planning to retire in the next three years. You can see selected slides from the report [here](#).

We are already using the data from this report to influence London MPs' understanding of the pressures facing general practice and the knock-on effect on patients. Thank you to all those who completed the survey, it provides invaluable data which we use in making the case for London general practice in numerous settings.
